Ans) Examples of bad design thinking :-

Example 1 :- Parking signs :-

Usually parking signs are placed at places where it is unable for a driver to read. Parking signs should be such that can be seen at one glance.

Parking signs are more like the fine print at the bottom of an advertisment.

Parking signs should be placed at a proper place for a driver to see.

Example 2 : Doors that don't indicate push or pull

It is very difficult to figure out
There should always be a sign of push or pull
on a door Because if it is not there it is
50% chance of getting the right side ?.
The label makes it a little easier for
a person to figure out in 1 second.

Example 3 : Class tables which have right handed
desks only :

The tables which have only right side desk
makes left handed students very uncomfortable
and it is really uniform the desks as all people
are not right handed.

Example 5:- . Steps in front of disabled people Washroom :-

There ~~were~~ was a step in front of the washroom for disabled people. This doesn't make sense So, it is a really bad design thinking idea. and basically makes washroom useless and difficult for people to use.

DISABLED SHOWER

Unisex Shower
